## R/flex ${ }^{\circledR} 8080$ Liquid Photoimageable Covercoat

## Description

Rogers R/flex ${ }^{\circledR} 8080$ Liquid Photoimageable Covercoats help achieve the ultra-fine patterns needed for today's high density flexible printed circuits. Offering uniform coverage and reliable performance in mass production processes, $R /$ flex 8080 materials allow manufacturing of high precision patterns unattainable through conventional screen printing.

Contact photo exposed and alkaline developable, R/flex 8080 products provide excellent resistance to all plating processes, including electroless nickel and gold plating. Processing stability, along with long shelf life and pot life, make R/flex 8080 covercoats dependable solutions to meet industry performance requirements.

R/flex 8080LP3, 8080LP5, 8080LP6, and 8080LP7 are silicone-free formulas.

## Product Features

- Ideal for high density, ultra-fine feature flexible printed circuits
- Suitable for mass production processes
- Long shelf life and pot life with excellent process stability
- Exceptional adhesion, heat resistance and electrical insulation properties
- Excellent plating resistance, including electroless Ni and Au plating processes
- Outstanding flexibility and creaseability

## R/flex 8080 Part Numbering System

To determine the part number for 8080, use the following system.

For example, a product with the part number listed above would have the following characteristics:

1. Product Type - The first number indicates the product types for R/flex 8080:

| Product Type | Critical <br> Mixing Ratio <br> Resin/Hardener | Weight Mix <br> Ratio <br> Resin/Hardener |
| :---: | :---: | :---: |
| 8080LP1 | $100 \mathrm{~g} / 38 \mathrm{~g}$ | $1 / 0.38$ |
| 8080LP2 | $100 \mathrm{~g} / 46 \mathrm{~g}$ | $1 / 0.46$ |
| 8080LP3 | $100 \mathrm{~g} / 46 \mathrm{~g}$ | $1 / 0.46$ |
| 8080LP4 | $100 \mathrm{~g} / 38 \mathrm{~g}$ | $1 / 0.38$ |
| 8080LP5 | $100 \mathrm{~g} / 46 \mathrm{~g}$ | $1 / 0.46$ |
| 8080LP6 | $100 \mathrm{~g} / 43 \mathrm{~g}$ | $1 / 0.43$ |
| 8080LP7 | $100 \mathrm{~g} / 43 \mathrm{~g}$ | $1 / 0.43$ |

The example is product type 1.
2. Product Color - The letter " $G$ " indicates Green. "A" indicates Amber. Pigment is in the resin portion.
3. Net Weight $(\mathrm{g})$ - Net weight of the container is expressed in grams. The example product weight is 640 grams.
4. Resin or Hardener - R/flex 8080 is a 2 part system. The letters " $R$ " and " $H$ " designate whether the product is a resin or hardener. The example product is a resin.

For product types 1 or 4 , multiply the weight of base resin used by the hardener weight factor of 0.38 to determine the required quantity of hardener needed. For product types 2,3 and 5 , use hardener weight factor of 0.46 and for product types 6 and 7 , use a hardener weight factor of 0.43 ."

## Example:

If 0.155 Kg or ( 155 grams) of TYPE 1 or 4 resin is used, then multiply by hardener weight factor of 0.38 . ie., $0.155 \mathrm{Kg} \times 0.38=0.0589 \mathrm{Kg}$ (or 58.9 grams).

## Typical Values

| Specific Properties | 8080LP 1 | 8080LP2, 3, 5, 6 \& 7 | 8080LP4 |
| :---: | :---: | :---: | :---: |
| Viscosity @ $25^{\circ} \mathrm{C}\left(77^{\circ} \mathrm{F}\right)$ | 190-230PS | 190-230PS | 190-230PS |
| Pot Life @ ambient | approx. 3 days | approx. 3 days | approx. 3 days |
| Approx. shelf life @ $5^{\circ} \mathrm{C}\left(41^{\circ} \mathrm{F}\right)$ | 6 months | 6 months | 6 months |
| Approx. shelf life @ $25^{\circ} \mathrm{C}\left(77^{\circ} \mathrm{F}\right)$ | 3 months | 3 months | 3 months |
| Drying after screening s/s (167 ${ }^{\circ} \mathrm{F}$ ) | $75^{\circ} \mathrm{C}, 30 \mathrm{~min}$ | $75^{\circ} \mathrm{C}, 30 \mathrm{~min}$ | $75^{\circ} \mathrm{C}, 30 \mathrm{~min}$ |
| Photoexposure | $400-600 \mathrm{mj} / \mathrm{cm}^{2}$ | $400-600 \mathrm{mj} / \mathrm{cm}^{2 * *}$ | $500-700 \mathrm{mj} / \mathrm{cm}^{2}$ |
| Development Time/Rinse Time | 1 min each | 1 min each | 1 min each |
| * Final Cure (do not exceed 60 min .) Solder dip test | $150^{\circ} \mathrm{C} / 302^{\circ} \mathrm{F} / 30 \mathrm{~min}$ | $150^{\circ} \mathrm{C} / 302^{\circ} \mathrm{F} / 30 \mathrm{~min}$ | $150^{\circ} \mathrm{C} / 302^{\circ} \mathrm{F} / 30 \mathrm{~min}$ |
| 10 seconds @ $260^{\circ} \mathrm{C} / 500^{\circ} \mathrm{F}$ | Pass | Pass | Pass |
| Thermal Decomposition Temp. | $358^{\circ} \mathrm{C}\left(676^{\circ} \mathrm{F}\right)$ | $382^{\circ} \mathrm{C}\left(719^{\circ} \mathrm{F}\right)$ | $382^{\circ} \mathrm{C}\left(719^{\circ} \mathrm{F}\right)$ |
| Pencil hardness | 5H | 5 H | 5 H |
| Dielectric Strength | 500 to $700 \mathrm{~V} / \mathrm{mil}$ | 500 to $700 \mathrm{~V} / \mathrm{mil}$ | 500 to $700 \mathrm{~V} / \mathrm{mil}$ |
| Water absorption immersion |  |  |  |
| $24 \mathrm{hr} / 23^{\circ} \mathrm{C}\left(73^{\circ} \mathrm{F}\right)$ | 1.29\% | 1.29\% | 1.29\% |
| $4 \mathrm{hr} / 85 \% / 85^{\circ} \mathrm{C}\left(185^{\circ} \mathrm{F}\right)$ | 0.73\% | 0.73\% | 0.73\% |

** 8080 LP5 requires an exposure of $530-750 \mathrm{mj} / \mathrm{cm}^{2}$, LP6 requires an exposure of $460-690 \mathrm{mj} / \mathrm{cm}^{2}$ and LP7 requires an exposure of $600-900 \mathrm{mj} / \mathrm{cm}^{2}$.
Rated Properties 8080LP1 8080LP2, 3, 5, 6 \& $7 \quad 8080$ LP4

| Brittleness in Process | 2 to 4 | 2 to 4 | 2 to 4 |
| :--- | :---: | :---: | :---: |
| Final Flexibility | 10 | 7 | 7 to 5 |
| Tackiness at Photo | 5 | 5 to 7 | 10 |
| Heat Resistance | 7 | 10 | 7 |
| Photosensitivity | 10 | 7 | 7 |
| Final UV Resistance | 10 | 7 | 7 |
| Developability | 10 | 7 | 7 |
| Electro-chemical migration | 7 | 7 | 10 |
| Plating Resistance to Ni/Au | 7 | 10 (LP5 \& LP7 are 8) | 10 |

## Notes:

1. *Do not use UV heating systems for curing/baking. Use convection oven with good turnover. Total cure time not to exceed 60 minutes.
2. Avoid creasing product between coating, photo and final cure to avoid cracking. Full properties develop at final cure.
3. UV lamp wavelength in exposing unit should be 365 nm . Do not use collimated light. Artwork and cover must be UV transparent polyester.
